

Pre-Amp Goals:

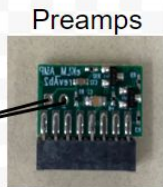

1. Make a circuit to test the pre-amps individually
2. Find & test all the pre-amps in the lab
 - a. Separate the good ones from the bad
3. Organize & Label all the pre-amps

Signal Generator

Input Connector

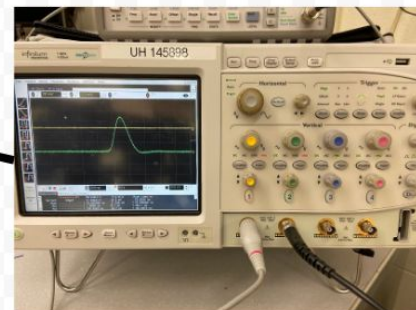

Preamps

Carrier

Ribbon Cables

Test Card

Oscilloscope

Power Supply

Side Note:

Some of the pre-amps were already labeled when I found them, but had a different convention for labeling than I used, thus why they all don't follow the same convention.

My convention: **LETTER, 2-DIGIT NUMBER** (e.g., B09)
